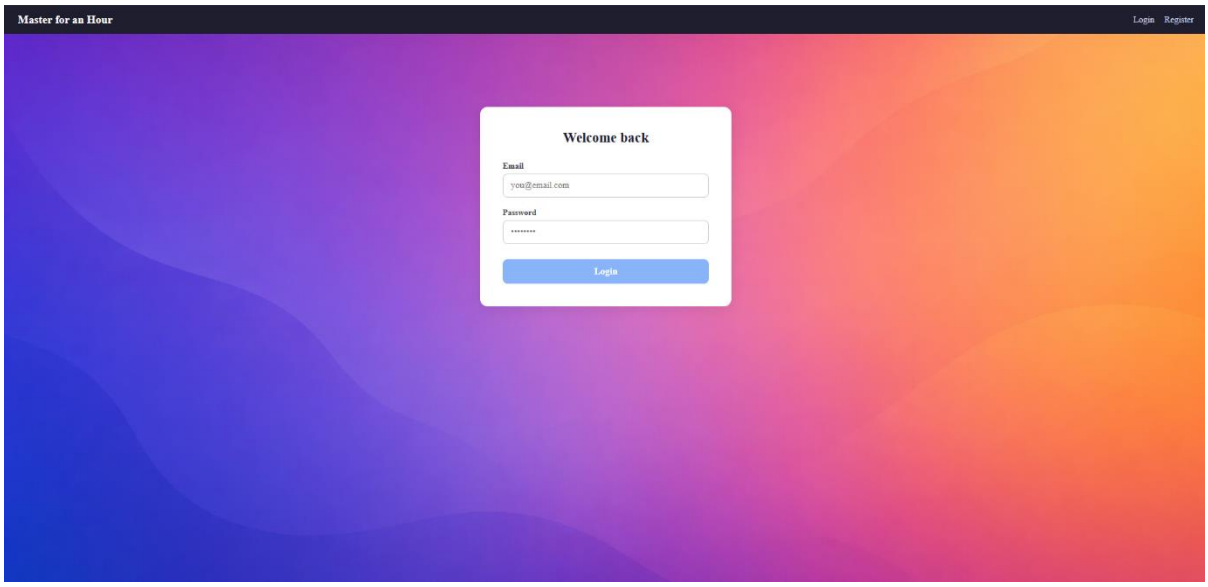
Login Page

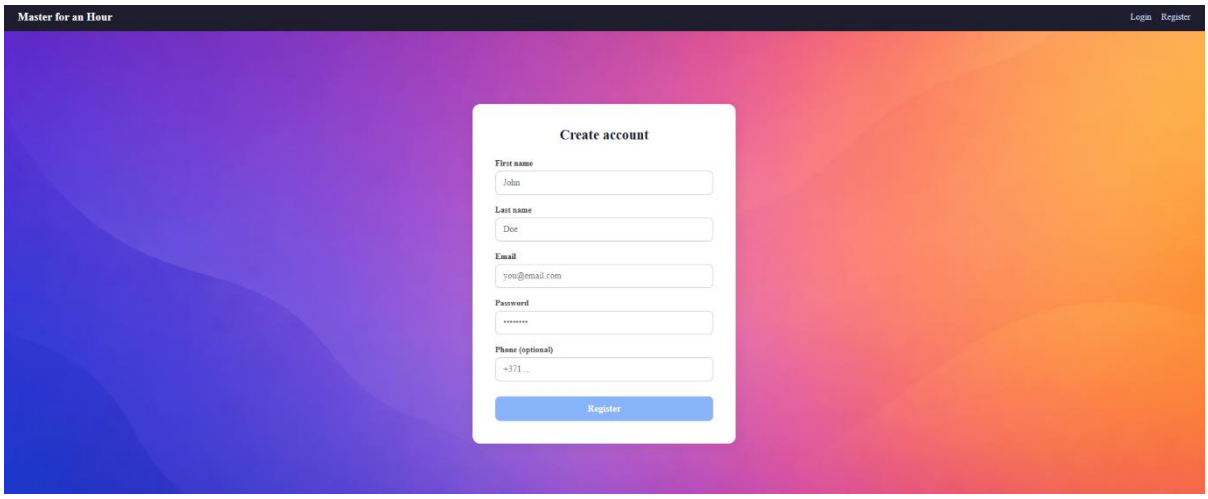


Login form in the center
The user enters email and password. When the user presses the login button, the system checks if the fields are filled and if the email format is correct. After that, the system sends the data to the server for authentication. If the data is correct, the user is logged in. If not, an error message is shown.

Login button
After clicking the login button, the system validates the input fields and sends a request to the server. If authentication is successful, the user is redirected to the main page. If it fails, an error message is displayed.

Navigation links in the top right corner
Login link keeps the user on the current page.
Register link redirects the user to the registration page.

Register Page



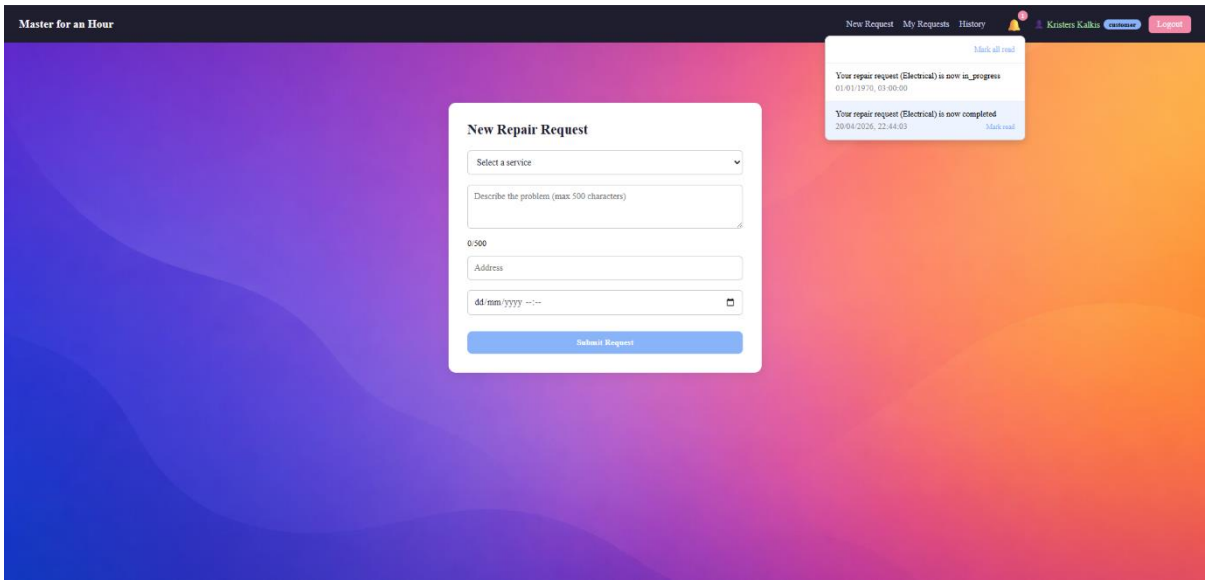
Registration form in the center
The user enters name, last name, email, password, and optionally phone number. The system checks that required fields are filled and valid.

Register button
After clicking, the system validates all inputs. If everything is correct, the data is sent to the server to create a new account. After successful registration, the user is redirected to the login page and sees a confirmation message.

Navigation links in the top right corner
Login link redirects to the login page.
Register link keeps the user on the current page.

USER SIDE

New request page



Service selection field
The user selects the type of service from a list. The system may adjust available options based on selection.

Problem description field
The user writes a description of the issue. This field is required.

Address field
The user enters the service location. The system checks that it is not empty.

Date selection field
The user selects the desired date for the service. The system prevents selecting past dates.

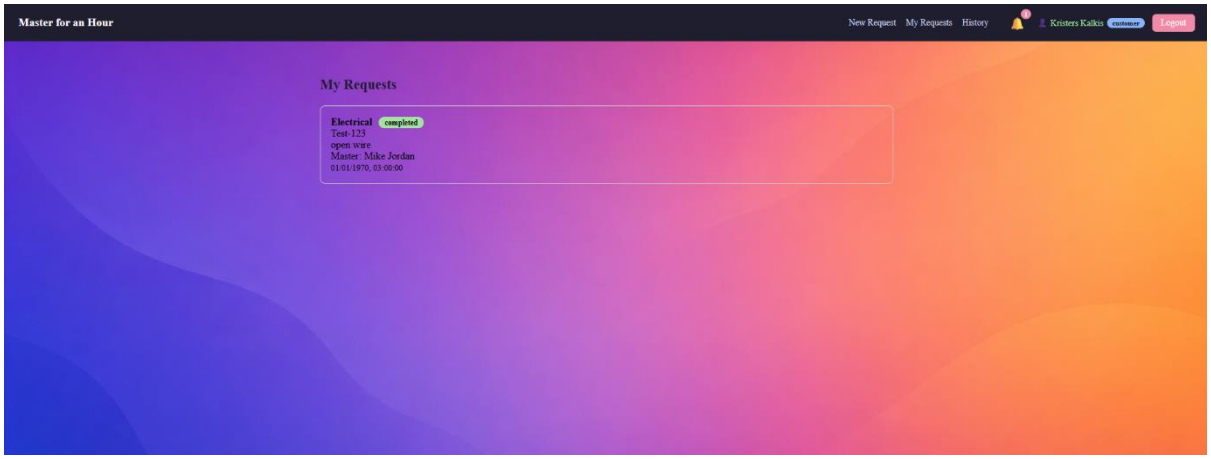
Submit button
After clicking, the system checks that all fields are completed correctly. Then the request is sent to

the server. After successful submission, the form is cleared and the user sees a confirmation notification.

Top right navigation
Active requests opens the list of current requests.
History opens the list of completed requests.
Logout ends the session and returns to the login page.

Notification bell
Shows new notifications. When clicked, it opens a list of updates such as request in progress or completed.

Request history page



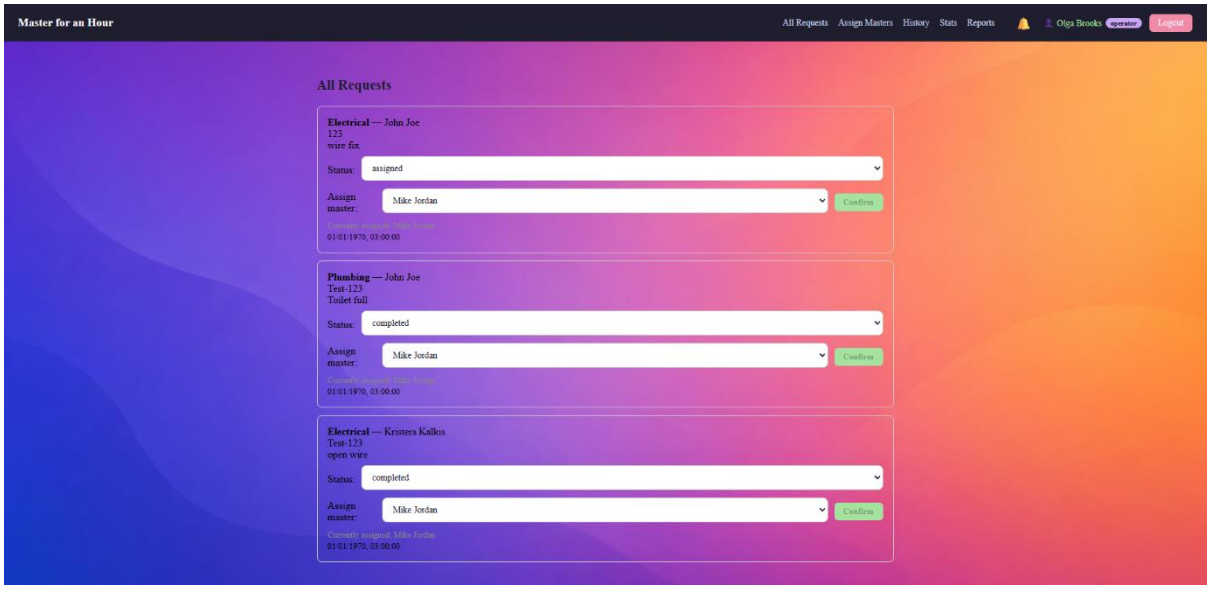
Request list
Displays all submitted requests with their statuses.

Status display
Each request shows its current status such as pending, in progress, or completed.

Top right navigation
Same functionality as on other user pages.

OPERATOR SIDE

Main dashboard

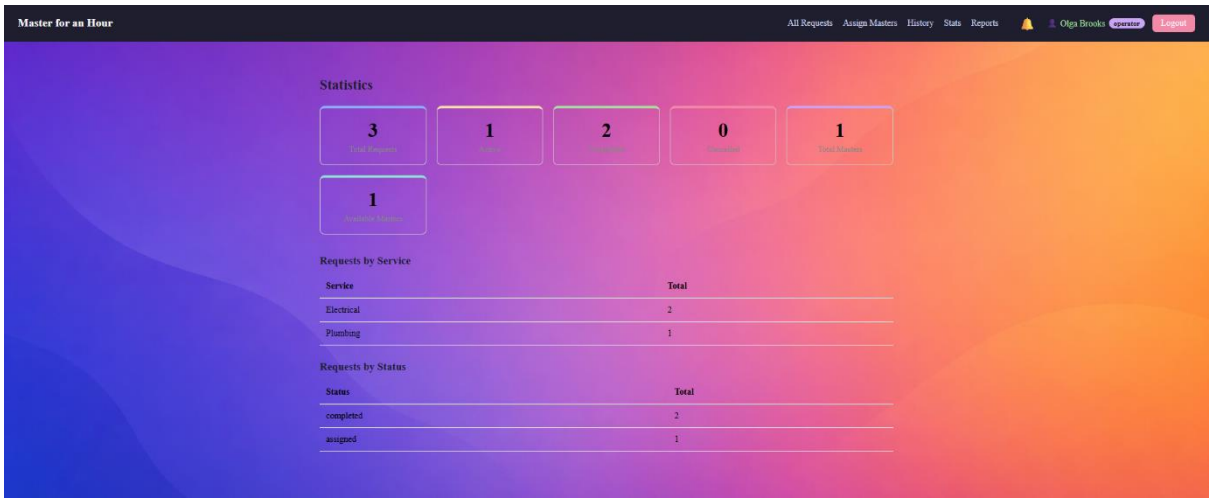


Request list
Displays all new and ongoing requests.

Assign master control
Operator selects a master for a request. The system updates the assignment.

Status change control
Operator can change the request status. The system updates it immediately.

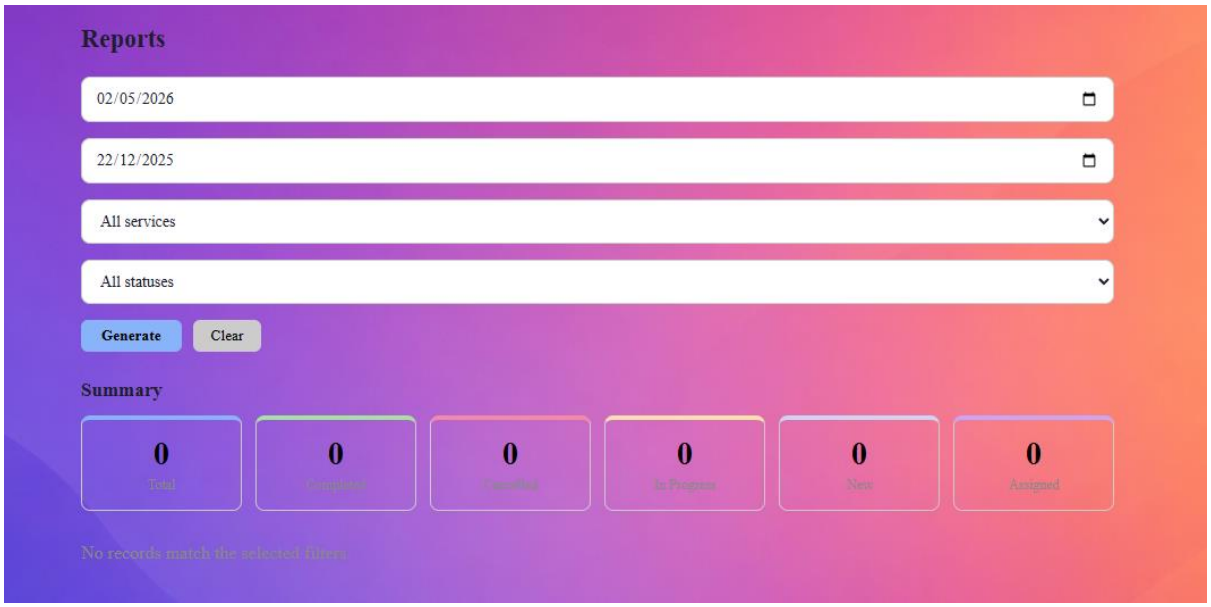
Statistics page



Summary information
Displays total number of requests and their statuses.

Category statistics
Shows how many requests belong to each service category.

Reports page



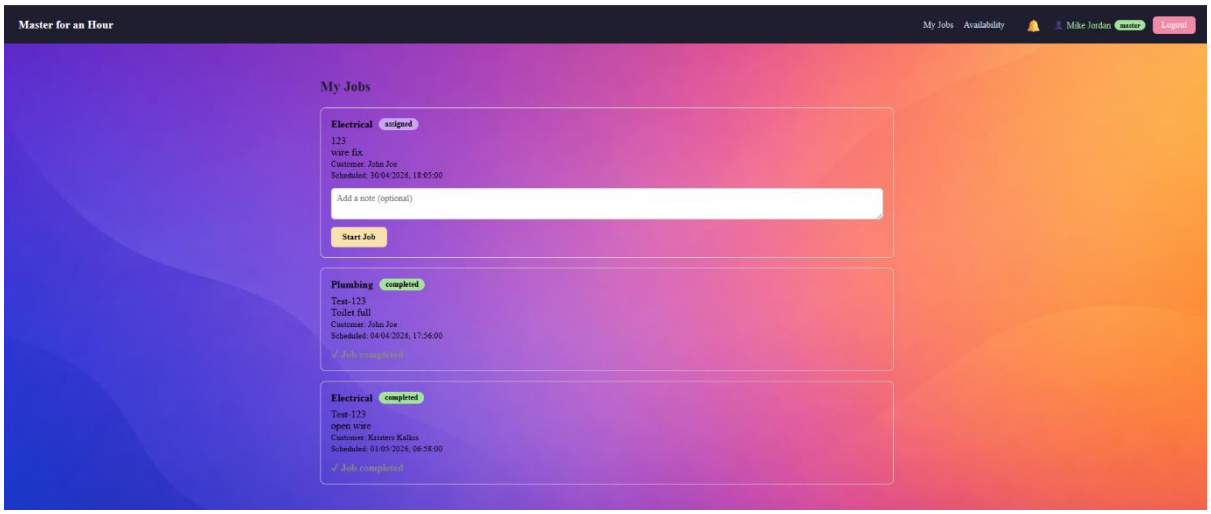
Date range selection
Operator selects a time period.

Generate report button
After clicking, the system collects data for the selected period.

Report display
Shows summarized information such as total requests and their statuses.

MASTER SIDE

Jobs page

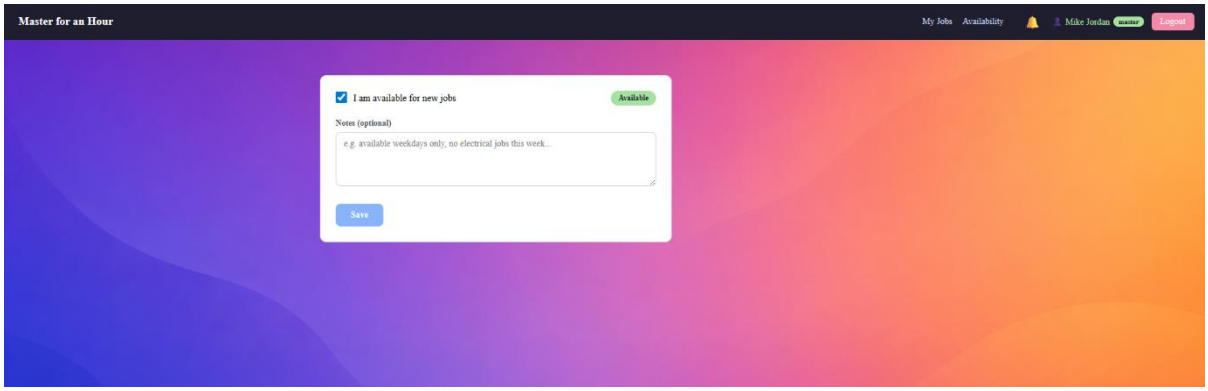


Job list
Displays all jobs assigned to the master.

Start job button
Changes job status to in progress and updates the system.

Finish job button
Marks the job as completed and sends notification to the user.

Availability page



Availability control
Master can set status to available or not available. If not available, the operator cannot assign new jobs.

GENERAL SYSTEM BEHAVIOR

Form validation
All forms check that required fields are filled and data is correct before submission.

Notifications
System informs users about important updates such as job progress and completion.

Session management
Logout ends the session and prevents access until the user logs in again.
